the international monetary fund imf launched the data standards initiatives to enhance member countries data transparency and to promote their development of sound statistical systems the need for data standards was highlighted by the financial crises of the mid 1990s in which information deficiencies were seen to play a role under the data standards initiatives the imf established the special data dissemination standard sdds in 1996 to provide guidance to countries that have or seek access to capital markets to disseminate key data so that users in general and financial market participants in particular have adequate information to assess the economic situations of individual countries the sdds not only prescribes that subscribers disseminate certain data categories but also prescribes that subscribers disseminate the relevant metadata to promote public knowledge and understanding of their compilation practices with respect to the required data categories in 1997 the imf introduced under the initiatives the general data dissemination system gdds to provide a framework for countries that aim to develop their statistical systems within which they can work toward disseminating comprehensive and reliable data and eventually meet sdds requirements at the eighth review of the fund s data standards initiatives in february 2012 the imf s executive board approved the sdds plus

as an upper tier of the fund s data standards initiatives the sdds plus is open to all sdds subscribers and is aimed at economies with systemically important financial sectors

thanks to the omnipresent computer current statistics can include data files of many thousands of values and can perform any exploratory analysis in less than seconds this development however fascinating generally does not lead to simple results we should not forget that clinical studies are mostly for confirming prior hypotheses based on sound arguments and the simplest tests provide the best power and are adequate for such studies in the past few years the authors of this 5th edition as teachers and research supervisors in academic and top clinical facilities have been able to closely observe the latest developments in the field of clinical data analysis and they have been able to assess their performance in this 5th edition the 47 chapters of the previous edition have been maintained and upgraded according to the current state of the art and 20 novel chapters have been added after strict selection of the most valuable and promising novel methods the novel methods are explained using practical examples and step by step analyses readily accessible for non mathematicians all of the novel chapters have been internationally published by the authors in peer reviewed journal including the american journal of therapeutics the european journal of clinical investigation the international journal of clinical pharmacology and therapeutics and other journals and permission is granted by all of them to use this material in the current book we should add that the authors are well qualified in their fields of knowledge professor zwinderman is president elect of the international society of biostatistics and professor cleophas is past president of the american college of angiology from their expertise they should be able to make adequate selections of modern methods for clinical data analysis for the benefit of physicians students and investigators the authors although from a different discipline one clinician and one statistician have been working and publishing together for over 10 years and their research of statistical methodology can be characterized as a continued effort to demonstrate that statistics is not mathematics but rather a discipline at the interface of biology and mathematics they firmly believe that any reader can benefit from this clinical approach to statistical data analysis
